

Stream Suite Business Intelligence

What You Need to Succeed

Experts say that being good is the new average. To be successful, you need to be remarkable. Being remarkable takes a new level of knowledge; it takes business intelligence (BI).

The BI module for all Stream systems is specifically designed for the insurance market with over 70 preconfigured Property & Casualty insurance reports and the ability to easily create more. In addition, there are dashboards, scorecards, ad-hoc reporting and hundreds of measures for analytics.

We chose the [4Sight BI](#) system for *Stream Suite* because Stream is excellent at capturing data and transactional processing. 4Sight BI brings industry-leading business intelligence and analytics (i.e., dimensional, time-series, and segmentation) to turn that data into information for making better business decisions.

You get **actionable data in easy-to-use formats for analysis and enhanced decision making**. With Stream's Business Intelligence from 4Sight BI, you gain operational insight as well as the ability to fine-tune your critical decision making and strategic planning.

Benefits

The Stream BI module enables carriers to:

1. **Eliminate guesswork.** Running a business shouldn't be like gambling. Far too often, executives must rely on "best guess" and "gut feel" decisions as they attempt to steer their companies into the future. Business intelligence can provide more accurate historical data, synthesis between departmental data stores, forecasting and trending, and even predictive "what if?" analysis.

2. **Improve efficiency with faster answers to your business questions.** BI users can quickly get answers to business questions without hunting for data from within various departments. Role-based filters automatically tailor content for specific business users.
3. **Get insight into customer behavior – uncover hidden patterns and relationships.** Companies can find out what customers are buying (or not), giving them the ability to turn this knowledge into additional profit and customer retention.
4. **Learn how to streamline operations** with detailed insights into business performance.

Take Charge: From Goals to Reality

With the 4Sight BI module there are over 150 insurance-specific key performance indicators (KPIs). You can choose to view KPIs by these time periods and more:

- Day
- Week
- Month
- Quarter
- Year
- Year-to-date
- Inception-to-date
- Last three months
- Last quarter
- Last 12 months

In Stream over 70 standard reports come out-of-the-box with the 4Sight BI system, providing access to an underlying database from which an unlimited number of queries and reports can retrieve information. You also have ad-hoc reporting capabilities that allow you to create specific customized queries. Integration with Google Maps provides interactive, visual displays of geographical information. The drag-and-drop report design enables you to create reports very quickly. 4Sight BI's user-friendly, GUI-based system means you don't need in-depth knowledge of SQL or database schema that would usually require a programmer.

Develop a BI Strategy

StoneRiver offers services to help customers define, design, and implement a business intelligence strategy to meet their individual business and technical goals. Specialized analysts bring an in-depth understanding of business intelligence and data warehousing to every stage in the process extensive experience within the insurance industry. While each project is unique and specific based on the needs of the customer, StoneRiver analysts typically help with the following:

- **Business Intelligence Strategy:** Help business executives determine enterprise business intelligence goals and objectives, including technology strategy, change management strategy,

defining a roadmap of projects, required resources, and timelines.

- **Data Requirements:** Collaborate with business leadership to identify organizational pain points and specific opportunities within business processes to increase profitability, reduce costs, improve customer service, and drive operational efficiencies using business intelligence and analysis.
- **Data Improvement:** Identify strengths and weaknesses in available enterprise data and provide actionable recommendations to mitigate areas of weakness, including identification of third party data sources and data quality enhancements.

Business Isn't "One Size Fits All"

Get the answers you need with "what if" capabilities for underwriting, claims, billing, management, reinsurance, or other areas. You can quickly answer impromptu questions that surface in a meeting and use actionable data to drive business performance.
