

# StoneRiver ACORD Transaction Server

StoneRiver ACORD Transactions Server (ATS) offers a flexible and fast engine to process ACORD compliant transactions. With ATS, clients may interface using client-chosen technology such as Illustration systems, e-Applications or automated underwriting systems. ATS acts as the conduit for translating and managing the exchange of data in ACORD compliant formats.

StoneRiver ATS allows you to share business information among disparate systems without developing costly interfaces. With the StoneRiver ATS you can streamline processes by openly sharing data, in an ACORD compliant format, between and among your illustration, electronic application, contact management, new business and underwriting and policy administration systems.
